SECTION 1

About Realtor

Realtor is India's transparent real estate discovery platform built specifically for the Hyderabad market. The platform addresses a critical gap in the Indian property market: the lack of price transparency, verified data, and accessible analytics for everyday buyers and NRI investors.

Unlike traditional real estate portals, Realtor publishes both the **government circle rate** and the **prevailing market rate** side by side, along with RERA registration status, developer credibility scores, site verification reports, and AI-powered property analysis — all in one place.

Our Mission

To eliminate information asymmetry in Indian real estate by providing buyers with the same level of data that institutional investors have access to — verified, accurate, and up-to-date.

Current Coverage

Hyderabad, Telangana — covering 17+ micro-markets including Gachibowli, HITEC City, Banjara Hills, Jubilee Hills, Kondapur, Kokapet, Financial District and more.

50+

Verified Listings

17

Hyderabad Areas

100%

Transparent Pricing

Realtor is available as an **Android mobile app** (APK download) and as a **web-based admin portal** for property managers and administrators.

SECTION 2

Key Features Overview

Smart Property Search

Search across 50+ properties by area, property type, price range, and status. Real-time filtering with location-based priority sorting.

Interactive Map View

Explore all properties on a live Google Map with price pin markers. Tap any pin to see a quick property card without leaving the map.

Price History Charts

View 5-year price appreciation charts for every property. Understand past performance and year-over-year growth before investing.

POC Transparency

Every listing shows the government circle rate vs. market rate, RERA registration number, verification status, and transparency score out of 100.

AI Property Assistant

Ask any question about properties, Hyderabad real estate market, investment strategies, or legal queries. Powered by OpenAI GPT-4.

Investor Dashboard

Dedicated NRI/investor view with top ROI properties, area-wise rate comparison, and transparency overview across all listings.

Visit Scheduling

Book a site visit directly from the app. Choose your preferred date and time and send a message to the agent — all in-app.

Saved Properties

Bookmark properties you love. Your saved list syncs across sessions and is tied to your account — never lose track of a property.

SECTION 3

Getting Started

3.1 Installing the App

The Realtor app is available as an Android APK. Download and install it directly on your Android device — no Play Store required.

1 Download the APK

Obtain the Realtor APK file from your administrator or the official download link. The file name will be Realtor-v1.0.2.apk.

2 Enable Unknown Sources

On your Android device go to **Settings** → **Security** → **Install Unknown Apps** and enable installation from your file manager or browser.

3 Install & Open

Tap the downloaded APK file, accept permissions, and tap **Install**. The Realtor icon will appear on your home screen.

⚠ Requires Android 8.0 (API level 26) or above. A stable internet connection is required for all features including property listing, map, and AI chat.

3.2 Creating an Account

1 Open the App

The app opens to the Sign In / Sign Up screen. Tap **Sign Up** tab to create a new account.

2 Enter Your Details

Fill in your **First Name**, **Last Name**, **Email Address**, and a secure **Password**. All fields are required.

3 Agree & Create Account

Check the **Terms & Privacy Policy** checkbox and tap **Create Account**. You'll be logged in immediately.

3.3 Logging In

If you already have an account, tap **Log In** tab on the auth screen, enter your registered email and password, and tap **Sign In**. Your session persists — you won't need to log in again unless you explicitly sign out.

✓ Your login token is stored securely using **Expo SecureStore** — an encrypted device-level storage. Your credentials are never stored in plain text.

SECTION 4

Home Screen & Property Listings

The Home Screen is the central hub of the Realtor app. It loads all publicly listed properties from the server and displays them as browsable cards.

4.1 Screen Layout

Top Area

Contains the search bar and filter button. Fixed at the top of the screen — always visible even while scrolling through listings.

Property Cards

Each card shows: property photo carousel, title, area, price per sqft, total price in ₹ Lakhs/Crores, status badge, demand label, size, beds/baths, and a like (❤️) button.

Bottom Navigation Bar

Five tabs: **Home** (listings), **Map** (map view), **Explore** (investor dashboard), **Saved** (liked properties), and **Profile**.

4.2 Property Cards Explained

Element	Description
 Available	Property is actively listed for sale or rent
 Reserved	Property is under offer or reservation
 Sold	Property has been sold — shown for reference
 Draft	Property pending approval — not yet publicly confirmed
 High Demand	Strong buyer interest in this property or area
 Medium	Moderate buyer activity
 Low	Limited recent activity
✓ Verified badge	Site visited and documents cross-checked by the Realtor team

4.3 Liking a Property

Tap the  icon on any property card to save it to your favourites. The icon turns red when saved. You must be logged in — the app will prompt you to sign in if not authenticated. Your liked properties sync to the server and are accessible from any device.

SECTION 5

Search & Filters

5.1 Search Bar

The search bar at the top of the Home Screen lets you find properties by typing any keyword. The search is instant — results update as you type. You can search by:

- **Area name** — e.g. "Gachibowli", "HITEC City", "Banjara Hills"
- **Property title** — e.g. "Prestige", "Cloud Nine", "Metro"
- **Property type** — e.g. "Villa", "Apartment", "Office"
- **Plot ID** — e.g. "HYD-001", "HYD-012"

To clear the search, tap the × icon that appears on the right side of the search bar.

5.2 Filter Panel

Tap the **Filter** button (sliders icon) next to the search bar to open the full-width filter panel. The filter panel has three sections:

Location Filter (Primary)

A horizontal scrollable row of area chips — one for each unique area in the current listings. Tap any area chip (e.g. "Gachibowli", "Kokapet") to show only properties in that area. Tap **All** to clear the location filter. The count in brackets shows how many listings exist in each area.

Type Filter

Two checkboxes — **Residential** and **Commercial**. You can select one, both, or neither (= all types shown). Selecting only "Commercial" shows offices, retail spaces and warehouses. Selecting only "Residential" shows apartments, villas, duplexes etc.

Verified Only Toggle

A toggle switch that, when turned on, filters to show only properties that have been site-verified by the Realtor team. Verified properties have confirmed RERA numbers, cross-checked documents, and a transparency score of 70+.

The filter badge on the Filter button shows a red dot with a count when filters are active, so you always know how many filters are currently applied.

5.3 Clear Filters

Open the filter panel and tap **Clear all** (top right of the filter panel) to reset all filters at once and return to the full listing view.

SECTION 6

Property Details

Tap **View Details** on any property card to open the full property detail screen. This screen provides comprehensive information about a single property.

6.1 Image Carousel

The top section shows a swipeable photo gallery with up to 5 property images. Swipe left or right to browse photos. The dot indicators below show how many photos are available and which one is currently displayed.

6.2 Property Information Sections

Section	Information Shown
Header	Property title, area, status badge, demand label, RERA number (if available), verified badge
Price Box	Current price (₹ Lakhs or Crores), price per sqft, year-over-year gain (₹ and %)
Features	Bedrooms, Bathrooms, Garage spaces, Plot size, Year built, Zoning type
Description	Detailed property description written by the listing agent
Price History Chart	Bar chart showing year-wise prices from 2020 to 2025. Tap any bar to see the exact value. The peak year is highlighted.
Transparency Card	Circle Rate (govt. rate), Market Rate (current market), Premium % above circle rate, Rate source (e.g. Dharani portal), Last updated date
RERA Details	RERA registration number, Developer name, Site status (Developed / Under Construction / Vacant), Flood risk level
Agent Card	Agent name, role, and phone number. Tap phone number to call directly.
Comparable Properties	Similar properties in the same area shown as mini-cards for easy comparison

6.3 Transparency Score

Each property has a **Transparency Score from 0–100** calculated from: RERA registration (30 pts), Dual rate disclosure (25 pts), Site verification (25 pts), Source attribution (20 pts). A score above 70 is considered highly transparent.

Properties with a **✓ Verified** badge have been physically site-visited by the Realtor team and all listed documents have been cross-checked with the Sub-Registrar office records.

SECTION 7

Interactive Map View

The Map View tab shows all properties as price pins on a live Google Map of Hyderabad. This gives you an instant spatial understanding of property distribution and pricing across the city.

7.1 Reading the Map

White Pin

Inactive property marker. Shows price per sqft (e.g. ₹7,200). White background with red text.

Red Pin

Selected/active property marker. Shows price per sqft in white text on red background. Slightly larger than inactive pins.

7.2 Interacting with the Map

- 1 Tap a Price Pin**
Tap any price pin to select it. A property card slides up from the bottom showing the property photo, title, area, price, status and demand.
- 2 View the Property Card**
The card at the bottom shows key property info. Tap **View Details** on the card to go to the full property detail screen.
- 3 Dismiss the Card**
Tap anywhere on the map (away from a pin) to dismiss the property card and deselect the current pin.
- 4 Navigate the Map**
Pinch to zoom in/out. Drag to pan. The map defaults to Hyderabad centre. Your current location is shown with a blue dot if location permission is granted.

Location permission is optional. If denied, the map still works fully — it just won't show your current location dot. All properties will still appear as pins.

Saved Properties & Visit Scheduling

8. Saved Properties

The **Saved** tab (heart icon in bottom navigation) shows all properties you have liked. This list is tied to your account and persists across sessions and devices.

How to Save a Property

Tap the  icon on any property card on the Home Screen or the  button on the detail screen. The icon turns red to confirm it's saved. The count on the Saved tab badge updates immediately.

How to Remove a Saved Property

Tap the  icon again (it turns grey/outline) to un-save it. Or open the Saved tab and tap the heart icon on any saved card to remove it.

If you are not logged in and try to save a property, the app will redirect you to the Sign In screen. Your saves are stored server-side — they sync automatically after login.

9. Schedule a Site Visit

You can book a site visit for any available property directly from the property detail screen.

- 1 Open the Property Detail Screen**
Tap **View Details** on any property card to open the full detail screen.
- 2 Tap "Schedule Visit"**
Scroll to the agent section and tap the **Schedule Visit** button. A visit booking sheet slides up from the bottom.
- 3 Fill in the Visit Details**
Enter your **preferred visit date** (calendar picker), **preferred time** (e.g. "10:00 AM"), **your name**, and an optional **message** for the agent.
- 4 Submit the Request**
Tap **Confirm Visit**. Your request is sent to the admin portal where it appears as "Pending" until confirmed by the team.

Once your visit is confirmed by the admin team, the status changes to **Confirmed**. Contact the listed agent directly if you need to reschedule.

SECTION 10

AI Chat Assistant

The Realtor AI Assistant is a conversational AI powered by OpenAI's GPT-4. It is trained on Hyderabad real estate context and can answer a wide range of property-related questions in natural language.

10.1 Accessing the AI Chat

The AI Chat is accessible via the floating action button (FAB) — a circular button that appears on the Home Screen. Tap it to open the chat panel. You can also enable or disable the AI button from your Profile settings.

10.2 What You Can Ask

Property Questions

"Which 3BHK apartments are available in Kondapur under ₹1.5Cr?" or "Show me verified villas in Gachibowli."

Market Analysis

"What is the average price per sqft in HITEC City?" or "Which area has the highest ROI in Hyderabad right now?"

Legal & RERA

"What is RERA registration and why does it matter?" or "How do I verify if a developer is legitimate?"

Investment Advice

"Is Kokapet a good area to invest in 2026?" or "What is the difference between circle rate and market rate?"

10.3 Chat Features

Feature	Details
Chat History	Conversation is saved per session. You can clear history from the Profile screen.
Context Awareness	The AI remembers your conversation context within the same session — follow-up questions work naturally.
Real Property Data	The AI has access to your app's property database for specific listing queries.
Language	Responds in English by default. Can understand Hindi and Telugu queries.

The AI provides general guidance and market insights. Always consult a licensed real estate professional and conduct independent due diligence before making any investment decision.

SECTION 11

Investor Dashboard

The **Explore** tab (compass icon in the bottom navigation) opens the Investor Dashboard — a dedicated view designed for NRI investors and serious buyers who need market-level data, not just individual listings.

11.1 Transparency Overview

A summary tile row showing across all listed properties:

Metric	Description
Verified	Total number of site-verified properties
With RERA	Properties with a valid RERA registration number
Dual Rate	Properties disclosing both circle rate and market rate
Unverified	Properties awaiting verification
Avg Market Premium	Average % by which market rate exceeds government circle rate

11.2 Top Zones by ROI

A ranked list of Hyderabad areas sorted by average year-over-year price appreciation. Each zone shows the average market rate per sqft and the number of listings. Use this to identify which micro-markets are delivering the best returns.

11.3 Top ROI Properties

The top 4 individual properties with the highest year-over-year gain percentage. Each card shows property name, area, current price, and ROI %. Tap any card to open the full property detail screen.

ROI % is calculated as: **(Past Year Gain ÷ Current Price) × 100**. This represents the annualised price appreciation for the last 12 months, not a guaranteed future return.

SECTION 12

My Profile

The Profile screen is accessed from the rightmost icon in the bottom navigation bar (person icon). It allows you to manage your personal information, app preferences, and account settings.

12.1 Personal Information

Tap on any field to edit it. Available fields:

Field	Notes
Name	Your display name shown in the app
Phone	Contact number (optional, used for visit confirmations)
Email	Your registered email — cannot be changed after registration
Gender	Optional preference field

After editing any field, tap **Save Changes** to sync the update to your account.

12.2 App Settings

AI Assistant Button Toggle

You can enable or disable the floating AI chat button on the Home Screen. When disabled, the circular AI button is hidden — use this if you prefer a cleaner interface. The toggle state is saved locally on your device.

12.3 About This App

Tap **About This App** row (with the ⓘ icon and › chevron) to open the full About screen. The About screen includes:

- App version and release information
- Platform features with descriptions
- How It Works — 4-step overview
- App info card (developer, platform, data sources)

12.4 Sign Out

Scroll to the bottom of the Profile screen and tap **Sign Out**. This clears your session token from the device. You will be redirected to the login screen. Your saved properties and account data remain on the server —

they'll be restored when you log back in.

SECTION 13

Admin Login & Dashboard

The Admin Portal is a web-based interface for property managers and administrators. It provides full control over all listings, visit requests, developer profiles, and verification data.

Admin Portal URL: `https://realtor-1-xkyf.onrender.com`

Accessible from any modern browser on desktop or mobile.

13.1 Logging In

- 1 Open the Admin URL**
Navigate to the admin portal URL in any browser. You will see the login screen.
- 2 Enter Credentials**
Enter your admin **Email** and **Password**. Default credentials are `admin@realestate.com / admin123` — change this immediately after first login.
- 3 Access the Dashboard**
Upon successful login, you are redirected to the Dashboard overview page.

13.2 Dashboard Overview

The Dashboard homepage provides a real-time summary of all platform activity:

KPI Card	Description
Total Properties	All-time total listings in the database (public + private)
Available	Currently active listings open for sale
Sold	Completed transactions
Avg Price / sqft	Average price per square foot across all listings

Below the KPIs: **Transparency Overview** (POC metrics), **Status Breakdown** bar chart, **Recent Listings**, and **Visit Requests** management table.

13.3 Sidebar Navigation

The left sidebar (dark blue) contains all admin sections:

Menu Item	Function
-----------	----------

 Dashboard	Overview, KPIs, recent activity
 Properties	Full property management table
 Map View	Google Maps view of all properties
 Add Property	Step-by-step form to add a new listing
 Developers	Developer registry management
 Visit Requests	View and manage all scheduled visits

Managing Properties

14.1 Properties Table

Navigate to **Properties** in the sidebar. The table shows all listings (public and private) with columns for: Plot ID, Title, Area, Category, Status, Verified, RERA Number, Price/sqft, Size, Visibility, Approval Status, Last Updated, and Actions.

Searching & Filtering

- Use the search bar to filter by plot ID, title, area, or status
- Check **Verified only** to show only verified listings
- Click the refresh button (↻) to reload data from the server

14.2 Adding a New Property

Click **Add Property** in the sidebar or the **+ Add Property** button on the Properties page. The form has 4 steps:

1 Basic Information

Enter Plot ID (e.g. HYD-101), title, area name (free-text field — type any Hyderabad locality), and select the property category (Residential / Commercial / Villa / Apartment etc.)

2 Pricing

Enter price per sq.ft and plot size. The system automatically calculates the total price. Add historical price entries for each year (2020–2025) using the **+ Add Year** button.

3 Details & Location

Fill in agent info, description, POC transparency fields (circle rate, market rate, RERA number, developer, flood risk). Use the **map search bar** to find the location — type the area name and click Search. Then fine-tune by clicking the exact spot on the map.

4 Review & Publish

Review all details in the summary view. Toggle **Visible to public** to control whether the listing appears in the mobile app. Click **Publish Property**.

14.3 Editing a Property

Click the  edit icon on any row in the properties table. A drawer slides in from the right with all editable fields. Make your changes and click **Save Changes**. The drawer also allows you to:

- Toggle the property between **Public** (visible in app) and **Private**
- Add or remove **price history** entries
- Upload **site photo URLs**
- Add **local updates** (news/events affecting the property)
- Submit a **verification report** after a physical site visit

14.4 Deleting a Property

Click the  delete icon on any row. A confirmation dialog appears — click **OK** to permanently delete the listing. This action cannot be undone.

Deletion is permanent. All associated price history, site photos, and verification reports for that property will also be deleted. Consider setting the status to **Draft** instead of deleting if you may need the data later.

SECTION 15

CSV Bulk Upload

The CSV Bulk Upload feature allows you to add up to hundreds of properties at once by uploading a structured spreadsheet file. This is the fastest way to populate the platform.

15.1 How to Upload

- 1 Go to Properties Page**
Click **Properties** in the sidebar.
- 2 Click Upload CSV**
Click the **↑ Upload CSV** button in the toolbar. A file picker opens.
- 3 Select Your File**
Choose your **.csv** file. Maximum size is 10MB. The upload begins immediately.
- 4 Review the Result**
A result banner appears showing: **Created** (new), **Skipped** (duplicate plot_id), and **Errors** (invalid data). The table refreshes automatically.

15.2 CSV Format Requirements

The CSV must have a header row with these columns (at minimum):

Column	Required	Example
plot_id	Yes	HYD-001
title	No	Prestige Lakeview Villa
area	Yes	Gachibowli
category_type	Yes	residential / commercial
status	No	Available / Sold / Reserved / Draft
price_per_sqft	Yes	8800
size	Yes	2800
lat	Yes	17.4401
lng	Yes	78.3489
is_public	No	true / false

is_verified	No	true / false
demand	No	High / Medium / Low
price_2020 ... price_2025	No	14500000

Properties with a `plot_id` that already exists in the database are automatically **skipped** (not duplicated).
Use unique IDs for each property.

Admin Map, Developers, Visits & Verification

16. Admin Map View

Navigate to **Map View** in the sidebar to see all properties plotted on an interactive Google Map. The admin map has additional tools beyond the mobile app's map:

Feature	Description
Search Bar	Type any area name (e.g. "Banjara Hills") and press Enter to search and jump to that location
Status Filter	Filter pins by Available / Sold / Reserved / Draft
Category Filter	Show only Residential or Commercial properties
Fit All Button	Auto-zooms the map to show all currently filtered properties
Stats Bar	Shows live counts of showing / available / sold / reserved properties
Info Popup	Click any pin to see title, price, area, RERA number, and verified status
Pin Colours	Green = Available, Purple = Sold, Amber = Reserved, Gray = Draft

17. Developer Registry

Navigate to **Developers** in the sidebar. This page manages the list of registered property developers. Each developer record includes name, contact details, registered projects, and credibility score. Developers listed here appear as selectable options when adding properties.

18. Visit Requests Management

Navigate to **Visit Requests** in the sidebar (also visible on the Dashboard). This table shows all site visit bookings submitted by mobile app users.

Column	Description
Property	The property the visit is for
Visitor Name	Name provided by the user

Date & Time	Requested visit slot
Message	Optional message from the visitor
Status	Pending / Confirmed / Cancelled
Actions	Confirm or Cancel buttons

Click **Confirm** to approve a visit. Click **Cancel** to reject it. Status updates are reflected immediately in the database.

19. Transparency & Verification

To add a verification report to a property, open the Edit Drawer for that property and scroll to the **Verification Reports** section at the bottom. Fill in:

- **Verified by** — name of the person who visited the site
- **Site Status** — current physical state of the site
- **Notes** — observations from the site visit

Click **Submit Report**. The property's `is_verified` status updates to **true** and the ✓ Verified badge appears on the mobile app.

SECTION 20

Troubleshooting

Problem	Likely Cause	Solution
App shows blank/no properties	Backend API is in cold start (free tier sleeps after inactivity)	Wait 30–60 seconds and pull-to-refresh. The server is waking up from sleep.
Map is grey / not loading	Google Maps API key not set in the native build	Rebuild the APK via EAS Build with the API key in app.json.
Map pins not visible	SVG rendering issue on Android Google Maps	Rebuild the APK — the latest build fixes this with flat-colour markers.
Cannot log in (mobile)	API backend is unreachable or credentials are wrong	Check internet connection. Verify email/password. Try again after 30s.
Save / like button not working	Not logged in	Log in to your account first — saved properties require authentication.
AI Chat not responding	OpenAI API key expired or rate-limited	Check admin environment variables. Rotate the OpenAI API key if needed.
CSV upload fails	Missing required columns or invalid data formats	Check that plot_id, area, category_type, price_per_sqft, size, lat, lng are present. demand must be "High", "Medium" or "Low" exactly.
Admin portal shows blank page	Not logged in or session expired	Navigate to the root URL — you'll be redirected to login automatically.
Admin map shows no markers	REACT_APP_GOOGLE_MAPS_KEY not set in Render environment	Add the Google Maps key to Render Static Site → Environment → trigger a redeploy.
Properties not appearing in mobile app after CSV upload	is_public is set to false in the CSV	Edit the property in admin and toggle Visibility to Public, or set is_public=true in the CSV before uploading.

Technical Information

21.1 System Architecture

Mobile App

Built with **React Native + Expo SDK 54**. Uses Expo Router for file-based navigation. Fonts: Manrope family (400–700). Maps: react-native-maps with Google Maps. Secure storage: expo-secure-store.

Admin Portal

Built with **Create React App** (React 18). Maps: @react-google-maps/api. Icons: react-icons/fi. Deployed as a static site on Render.

Backend API

Node.js + Express REST API on port 3011. Authentication via JWT (7-day expiry). CSV parsing: csv-parse. File uploads: multer. Deployed on Render Web Service.

Database

PostgreSQL 17 hosted on Neon (serverless). 9 tables: properties, mobile_users, admin_users, price_history, user_saved_properties, visit_requests, chat_history, developers, verification_reports.

21.2 Hosted URLs

Service	URL
Backend API	https://realtor-ldp0.onrender.com/api
Admin Portal	https://realtor-1-xkyf.onrender.com
API Health Check	https://realtor-ldp0.onrender.com/api/health
GitHub Repository	github.com/saitejavellanki/Realtor

21.3 API Endpoints Reference

Method	Endpoint	Description
GET	/api/properties	Public listings (is_public=true)

GET	/api/properties/:id	Single property detail
GET	/api/properties/admin/all	All listings (admin auth required)
POST	/api/properties	Create a new property (admin)
PUT	/api/properties/:id	Update a property (admin)
DELETE	/api/properties/:id	Delete a property (admin)
POST	/api/properties/csv-upload	Bulk CSV upload (admin)
POST	/api/auth/mobile/register	User registration
POST	/api/auth/mobile/login	User login
GET	/api/saved	Get user's saved property IDs
POST	/api/visits	Schedule a site visit
POST	/api/chat	AI chat message

21.4 App Version History

Version	Release	Changes
1.0.0	Initial Release	Core property listings, map, auth, AI chat, admin portal
1.0.1	Patch	Auth gate fix, Android search bar shadow fix, CORS update
1.0.2	Current	Google Maps integration, map pin rendering fix, responsive admin portal, watermark UI, Realtor branding, 50-property Hyderabad dataset

Support & Feedback: For technical issues or feature requests, contact the developer at tejvellank@gmail.com or file an issue on the GitHub repository at

github.com/saitejavellanki/Realtor
